Agenda

KubeCon

CloudNativeCon

Europe 2019

- Introduction
- State of Affairs
- Roadmap
- Plugins
- Configuration (Corefile)
- Community/Contributing

CoreDNS

Introduction

KubeCon

CloudNativeCon

Europe 2019

- Flexible DNS server written in Go
- Started and led by Miek Gieben
- Based on Caddy HTTP server
- Plugin-based architecture, easily extended
- Supports DNS, DNS over TLS and others

Introduction

KubeCon

CloudNativeCon

Europe 2019

- Native support of Kubernetes
- Integration with etcd and other data sources
 - incl. AWS's Route 53, Redis, SQL, plain files
- Support for Prometheus metrics
- Forward to recursive DNS server

State of Affairs

KubeCon

CloudNativeCon

Europe 2019

- Version 1.5.0 (released 2019-04-07)
- Graduated CNCF project
 - Inception (2017)
 - Incubation (2018)
 - Graduation (2019)
- Growing community
 - 150+ contributors (Big Thanks!)
 - 15 maintainers
 - 30 public adopters
 - ~4000 stars

State of Affairs

KubeCon

CloudNativeCon

Europe 2019

- Each plugin is backed by an additional set of OWNERS
- New plugins:
 - Response Rate Limiting ([rrl](#))
 - Block ANY queries ([any](#))
- Kubernetes plugin:
 - Generally available (GA) since Kubernetes 1.11
 - Now the recommended default since Kubernetes 1.13

Google Summer of Code 2019

- Project ideas: github.com/cncf/soc#coredns
 - > *great contribution ideas*
- Mentor: **Yong Tang** (GitHub: @yongtang)
- Accepted project:
 - > *Support Source IP Based Query Block/Allow in CoreDNS*

State: CoreDNS Book

KubeCon

CloudNativeCon

Europe 2019

<https://book.coredns.opensource.rocks>*

Written by

John Belamaric

> *Google Engineer and CoreDNS maintainer*

Cricket Liu

> *DNS Architect at Infoblox and author of many DNS books on O'REILLY*

*DNS redirect fun with the help of [TXTDirect](#) and [GitNS](#) (using CoreDNS)

Roadmap

KubeCon

CloudNativeCon

Europe 2019

- Core
 - Performance and stability improvements
- Plugin
 - GRPC transport iteration client and server
 - DNS over HTTPS
 - resolver plugin as external plugin ([#2216](#))
 - more plugins

Data Plugins

KubeCon

CloudNativeCon

Europe 2019

- [file](#): read data from a single RFC 1035-style master file
- [auto](#): read data from RFC 1035-style master files
- [forward](#): read data from upstream resolvers
- [hosts](#): read zone data from a `/etc/hosts` style file
- *proxy*: deprecated and replaced by forward

Helper Plugins

KubeCon

CloudNativeCon

Europe 2019

- [reload](#): automatic Corefile reloads
- [errors](#): logging of error messages
- [log](#): log queries and response data to stdout
- [prometheus](#): expose metrics with [Prometheus](#) style endpoint
- [cache](#): DNS response caching

Plugins Kubernetes related

KubeCon

CloudNativeCon

Europe 2019

- *kubernetes*: read zone data from Kubernetes cluster API
- *etcd*: read zone data from etcd v3 endpoint
- *health*: enables a health check endpoint.
- *ready*: enables a readiness check HTTP endpoint

More Plugins

KubeCon

CloudNativeCon

Europe 2019

Built-in plugins (35+):

<https://coredns.io/plugins/>

External plugins (15+):

<https://coredns.io/explugins/>

Configuration structure

KubeCon

CloudNativeCon

Europe 2019

```
[ZONE:PORT] {  
    [PLUGIN]  
}
```

```
.:53 {  
    log {  
        # comment  
    }  
    kubernetes  
}
```

<https://caddyserver.com/tutorial/caddyfile>

<https://coredns.io/2017/07/23/corefile-explained/>

Authoritative DNS server config

KubeCon

CloudNativeCon

Europe 2019

```
coredns.io {  
    file coredns.io {  
        transfer to * 185.49.140.62  
    }  
    errors  
    log  
}
```

Recursive DNS server config

KubeCon

CloudNativeCon

Europe 2019

```
. {  
  forward . 8.8.8.8  
  cache  
  errors  
  log  
}
```

Configuration: Cache Sidecar

KubeCon

CloudNativeCon

Europe 2019

```
. :53 {  
    cache 30  
    forward . 8.8.8.8 {  
        force_tcp  
    }  
    errors  
    log  
}
```

DNS Rewrite to for local routing

KubeCon

CloudNativeCon

Europe 2019

```
. {  
  rewrite continue name www.example.com web-app.default.cluster.local  
  kubernetes  
  cache  
  errors  
  log  
}
```

Architecture

Community

KubeCon

CloudNativeCon

Europe 2019

- Most active:
 - GitHub: github.com/coredns/coredns
 - Slack: **#coredns** on slack.cncf.io
- More resources:
 - Web: coredns.io
 - Blog: blog.coredns.io
 - Twitter: @corednsio
 - Mailing list/group (not very active)
 - coredns-discuss@googlegroups.com

Contributions Welcome

KubeCon

CloudNativeCon

Europe 2019

- Star CoreDNS at github.com/coredns/coredns
- Add your company to ADOPTERS.md
- File bugs and contribute to issue discussions
- Create your first PR for docs or code
- Create a custom plugin for your use-case

CoreDNS Sessions

KubeCon

CloudNativeCon

Europe 2019

Meet the Maintainer: CoreDNS- John Belamaric, Google
Tuesday May 21, 2019 16:00 - 16:30
CNCF Answer Bar, Sponsor Showcase

Deep Dive: CoreDNS - Yong Tang, MobileIron & John
Belamaric, Google
Wednesday, May 22 • 14:50 - 15:25
Hall 8.0 E4

KubeCon

CloudNativeCon

Europe 2019

THANK YOU
